PROFESSIONAL SUMMARY

Penultimate-year Computer Science student at Swinburne University, double-majoring in Artificial Intelligence and Software Development, with hands-on experience building and shipping full-stack web applications end to end. As Head of Software & Technology at English Maxing, architected and deployed a production learning management system on AWS — a React/TypeScript single-page app backed by a serverless stack with Cognito authentication, AppSync/GraphQL, and DynamoDB. Comfortable owning products from idea to launch and motivated to keep solving meaningful technical problems.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#, SQL

Frameworks & Libraries: React, Node.js, .NET 9, Avalonia, Pygame, NumPy

Cloud & Databases: AWS (Amplify Gen 2, Cognito, AppSync/GraphQL, DynamoDB, S3), GraphQL, SQLite

Tools & Practices: Git, MVVM, NUnit, serverless architecture, role-based access control

EXPERIENCE

Head of Software & Technology

2026 – Present

English Maxing

- Architected and shipped a production learning management system (engmaxportal.com) on AWS Amplify Gen 2 a React/TypeScript SPA with Cognito authentication, AppSync/GraphQL, DynamoDB, and S3 storage.
- Designed a role-based platform for students and tutors with per-model authorization and JWT group-based access control.
- Built core LMS features: Elo-based progress tracking, task and submission workflows, feedback, and an in-app notification system.

Night Fill Team Member

2025 – 2026

Coles

- Met nightly replenishment KPIs in a fast-paced team environment.
- Maintained accuracy and pace under tight overnight deadlines.

Team Member

2022 – 2023

VEX Robotics Competitions

- Collaborated with a team in national and international robotics competitions, solving technical and logistical problems under tight deadlines.

PROJECTS

EngMax Portal

engmaxportal.com

React · TypeScript · AWS Amplify · Cognito · GraphQL · DynamoDB · S3

- Live, in-production LMS used by students and tutors, built and shipped end-to-end — full technical breakdown under Experience above.

Influence RTS Sandbox

[View repo](#)

Python · Pygame · NumPy · Influence Maps · Boids · FSM AI · Pathfinding

- AI-driven real-time strategy sandbox built for Swinburne's AI for Games unit. Player buildings emit influence across a tile grid that enemy bases read to coordinate attacks, while an autonomous director agent defends through a finite state machine — combining influence maps, boid steering, Dijkstra pathfinding, and tiered threat assessment into one emergent system.

Work Scheduler

[View repo](#)

C# · .NET 9 · Avalonia · MVVM · SQLite · NUnit

- Cross-platform desktop app that automates weekly staff rostering. Managers define reusable workload templates and register employees with skills and contracted hours; a custom priority-based algorithm auto-assigns staff, balancing contracted versus requested hours before exporting to CSV. Backed by a normalized SQLite database and covered by 26 NUnit tests.

EDUCATION

Bachelor of Computer Science (in progress)

2025 – Present

Swinburne University of Technology

- Double major in Artificial Intelligence and Software Development; currently in penultimate year.

High School Diploma

2024

Hillcrest Christian College
